Svenska A1 för ingenjörer
HT 2017

Discuss the questions and summarize your answers below!

1. Why are you taking this course? What are your expectations on the course? What do you wish to learn?

I want to learn some basic sentences in Swedish so that I can generally understand what is being said in for instance the supermarket. This is also what I expect to learn in the course.

2. Have you studied languages before? What did you find most challenging?

In high school we learned English, German, French, Spanish, Chinese, and Latin. New grammar can be challenging, and also remembering the meaning of words. It is also very hard to learn a new language on your own; you need to practice in real life.

3. Plan your group work! Where and when will you meet? How will you communicate within the group? Is there something else you need to think about?

Communicate via whatsapp. Meet every week. Maybe make a Google drive or Dropbox.
